

YANTING WANG

Ph.D. Candidate | Management Information System | Sungkyunkwan University Business School
Email: wyanting@skku.edu | ORCID: <https://orcid.org/0009-0001-1929-8439>
Location: #33507 Business School Hall, 25-2, Sungkyunkwan-ro, Jongno-gu, Seoul, South Korea

RESEARCH INTERESTS

- Multi-party Human-Robot Interaction and Collaboration
- Frontline Service Robot Design
- Robot Service Failure Recovery and Trust Repair
- Robot Design Framework for Real-world Application
- Virtual Reality in Education

RESEARCH METHOD

- Lab and Online Experiment
- Semi-structured Interview

EDUCATION

Ph.D. Candidate in Management Information Systems September 2022 – Present

Sungkyunkwan University, South Korea

Advisor: Sangseok You

M.S. in Management Information Systems March 2020 – March 2022

Sungkyunkwan University, South Korea

Advisor: Sangseok You

Thesis: "Enhancing robot explainability through social cues with a moderation effect of robot design."

Bachelor's Degree in International Business and Trade September 2014 – June 2019

Kangwon National University, South Korea

Ludong University, China

PUBLICATION

1. **Yanting Wang**, and Sangseok You. "Enhancing robot explainability in human-robot collaboration." In *International Conference on Human-Computer Interaction*, pp. 236-247. Cham: Springer Nature Switzerland, 2023.
2. **Yanting Wang**, and Sangseok You. "Designing Embodied Robots for Real-World Applications: A Contextual and Goal-Driven Framework Grounded in IS Design Science." *Korea Society of Management Information Systems (KMIS) Conference* (2025): 400-405.

PAPERS UNDER REVIEW

1. Sangseok You, **Yanting Wang**, and Lionel P. Robert Jr. "Building Trust in Robots, Identifying with Humans: Distinct Trust Pathways in Hybrid." Under review at *Applied Artificial Intelligence*.
2. **Yanting Wang**, Sangseok You, and Daphne Chang. "Online News Appraisal Under Stress: How Internal and External Resources Shape News Believability and Behavior." Under review at *Asia Pacific Journal of Information Systems*.

WORKING PAPERS

1. **Yanting Wang**, Sangseok You, Soowon Kim. “Robot Multi-Party Awareness in Complex Frontline Service Environments: Effects on Service Adaptability and Customer Revisit Intentions” **[Job Market Paper]**
 - **Research method:** Lab Experiment, Focus Group Interview, and Online open-ended Questions
 - **Introduction:** This project examines how multiple service robots interact with and manage multiple customers simultaneously in complex frontline environments, investigating key factors that influence service quality and customer experience.
 - **Targeting Journal:** Journal of Retailing and Consumer Services
 - **Status:** Manuscript under revision
2. **Yanting Wang**, Sangseok You. “Social Cues and Robot Explainability in Human-robot Collaboration”
 - **Research method:** Wizard of Oz Online Experiment
 - **Introduction:** This project examines how social cues influence perceived robot explainability across different collaborative task types.
 - **Targeting Journal:** MIS Quarterly
 - **Status:** Manuscript under development
3. **Yanting Wang**, Sangseok You, Younghoon Chang, Jaehyun Park, Sunghan Ryu, Seoyoun Lee. “Trust Repair in Human-Robot Interaction After Service Failure”
 - **Research method:** Lab Experiment and Online Experiment
 - **Introduction:** This project investigates effective trust recovery strategies for service robots following service failures, examining how robot responses influence users’ perceptions and behavioral intentions.
 - **Targeting Journal:** Information Systems Research
 - **Status:** Manuscript under development
4. Mincheol Shin, **Yanting Wang**, Jaeeun Lim, Sangseok You. “Comparing VR and MR for Spatial Learning”
 - **Research method:** Lab Experiment
 - **Introduction:** This project investigates how Virtual Reality and Mixed Reality differently support spatial learning through their distinct structural affordances.
 - **Status:** Manuscript under development

INDUSTRY COLLABORATION EXPERIENCE

1. **Hyundai Motor Company Robotics Lab (South Korea) 2022-2023**
 - **Project Title:** Developing and Validating Human–Robot–System Interaction Scenarios in Multi-Robot Service Environments
 - **Introduction:** This project investigates human-multi-robot interaction scenarios in a Hyundai Motor Group automotive showroom. We developed a virtual reality showroom and conducted lab experiments to validate key multi-robot interaction variables, including adaptability, role distribution, and transparency. Semi-structured interviews and focus group interviews (FGI) were also conducted to assist scenario development.

- **Outcomes:**
 - 1) Multi-robot interaction Scenario Pool
 - 2) 3D Virtual Reality Environment for Scenario Simulation
 - 3) Literature Review Report

2. Samsung Electronics (South Korea) 2024

- **Project Title:** Multimodal Interaction Design for Screen-Based Smart Devices
- **Introduction:** This project investigated multimodal interaction design principles for screen-based smart devices. As AI transforms devices into smart platforms, this study examines how embodiment type, user intent, and situational context shape effective voice and multimodal interaction across wearable, mobile, and wall-mounted displays.
- **Outcomes:** Literature review report and experimental design for multimodal interaction guidelines

TEACHING EXPERIENCE

1. Teaching Assistant – Undergraduate Course:

- IT Management
- Internet and Management

2. Teaching Assistant – Graduate Course □

- Deep Learning and Decision-Making in Management

SKILLS

- **Technical Skills:** SPSS, Python, R
- **Language Skills:** English (Fluent), Korean (Fluent), Chinese Mandarin (Native)

ACADEMIC SERVICE

1. Reviewer Experience:

- International Journal of Human-Computer Studies
- Frontiers in Robotics and AI
- ACM/IEEE International Conference on Human-Robot Interaction
- International Conference on Information Systems
- Hawaii International Conference on System Sciences
- European Conference on Information Systems

2. Conference Volunteer: HCI International 2023, HRI 2026
